

Geriatricians

UNIVERSITY OF PITTSBURGH AND UPMC

Frustrated by the current healthcare system? Looking for an opportunity to make a difference? Join us as we strive to develop a better approach in conjunction with America's largest academic healthcare system.

Designated by the John A. Hartford Foundation as a National Center of Excellence in Geriatrics, the University of Pittsburgh (Pitt) has more than two dozen geriatricians. Pitt is ranked among the nation's top 5 in NIH funding, while *US News and World Report* rates its healthcare system in the nation's top tier and our Geriatrics Division #9. In addition, Pittsburgh has been named America's Most Livable City, Best Arts City, and Best Urban Adventure City, and it remains one of the most affordable and best places to live.

We have a variety of faculty positions, including educational leaders, but we need to fill several immediately:

- **Director, Acute Care Geriatrics** to lead the next phase of "gerontifying" our hospital system
- **Vice Chief, Geriatric Research**
- **Consultant Geriatrician** for a new acute care geriatrics program
- **Geriatric Hospitalists** for two services that are re-designing acute care
- **PACE Geriatrician(s)** for our Program for All-Inclusive Care of the Elderly

The Division's success has been facilitated by the extraordinary support of the university and UPMC Health System. Both are committed not only to advancing the frontiers of geriatric knowledge but also to using such knowledge to develop and test innovative solutions to geriatric care. This has permitted us to garner competitive funding, including a \$20 million CMS/CMMI Innovations award, and to pioneer new programs that meet the "Triple Aim" in every geriatric care setting. The excitement of these efforts spills over into our teaching and has generated an outpouring of innovative educational programs, including a medical school "major" in geriatrics, a new inter-professional training program, a geriatrics "track" in the residency, and an award-winning CME program that annually attracts >500 attendees. These clinical and training efforts also benefit from a research program in aging that is one of the country's largest and most diverse.

Applicants should send a CV and cover letter outlining their career interests to:

Neil M. Resnick, MD

Professor and Chief, Division of Geriatric Medicine

3471 Fifth Avenue, Suite 500, Pittsburgh, PA 15213
