

UPMC SPORTS MEDICINE CONCUSSION PROGRAM

FELLOWSHIP IN SPORTS NEUROPSYCHOLOGY

Established in 2000, the UPMC Sports Medicine Concussion Program currently includes five attending clinical neuropsychologists who work within a multidisciplinary team to assess, diagnose, and treat concussions across the lifespan. This team includes primary care sports medicine, physical medicine and rehabilitation, neurovestibular rehabilitation, neurosurgery, neuro-radiology, behavioral neuro-optometry, and physical therapy, including both musculo-skeletal evaluations and sport-specific exertion therapy.

Under the guidance of **Michael “Micky” Collins, PhD, clinical and executive director**, the UPMC Sports Medicine Concussion Program sees over 17,000 patient visits, involving between 6,000 and 7,000 unique patients, each year. The clinical team is involved in the evaluation and management of concussions for athletes at all levels of sports participation, including professional, collegiate, high school, and youth athletes.

Neuropsychology fellow duties primarily consist of brief neuropsychological evaluations of pediatric and adult athletes, along with extended batteries as needed. In addition to serving athletes, the program also receives referrals for neuropsychological evaluations of patients with non-sports related mild traumatic brain injury (mTBI), as well as other neurologic and psychiatric disorders. There is opportunity for forensic and medico-legal consulting work as well.

The program is based within the University of Pittsburgh Department of Orthopaedic Surgery and is housed within clinical space at the UPMC Rooney Sports Complex. The state-of-the-art facility is home to UPMC Sports Medicine and includes a training and rehabilitation gym with a plyometric training floor, a therapeutic pool, and a specialized performance training center.

Next door is the UPMC Indoor Training Center, which features a quarter-mile, four-lane running track and full-size practice football field. The climate-controlled facility is utilized by the Pittsburgh Steelers and the University of Pittsburgh Panthers, who also occupy the Sports Training Center, which includes team meeting and film viewing rooms, weight training rooms, hydrotherapy facilities, and four 80-yard outdoor fields with observation towers.

In addition to this primary location, there are currently five satellite clinics located throughout the Greater Pittsburgh area including UPMC Lemieux Sports Complex in Cranberry, UPMC at Oxford Drive in Monroeville, UPMC Outpatient Center in Bethel Park, UPMC Children’s Hospital of Pittsburgh at Pine Township, and UPMC Children’s Hospital of Pittsburgh South in Bridgeville.

CLINICAL TRAINING MODEL

Fellows begin with a one-month training intensive working closely with Dr. Collins. Alongside current fellows, new fellows will learn competence with the clinical interview, administration of the vestibular/ocular-motor screening (VOMS), and interpretation of both computer-based neurocognitive testing and more traditional neuropsychological evaluation tools. After the first month, fellows will enter into the regular clinical rotation, in which they will work in some capacity with all faculty members and rotate amongst the satellite clinics. Fellow offices are located at the UPMC Rooney Sports Complex, where all fellows have access to all necessary equipment and resources.

The educational philosophy of the program is one of scientist-practitioner. The fellowship program emphasizes a patient-centered orientation to recovery and recognizes that each patient will have a unique clinical presentation and course of recovery. Fellows are expected to spend 80 percent of their time on clinical work and 20 percent of their time focusing on research. The UPMC Sports Medicine Concussion Fellowship Program is a member of APPIC (Member Code #9139). The fellowship program meets hourly requirements for clinically supervised practice in the Commonwealth of Pennsylvania.

Clinical Experiences

While fellows spend the majority of their time in clinic, there are a number of additional clinical learning experiences available. Clinical opportunities within the Department of Neurosurgery include weekly teaching case conferences, didactic lectures, and morbidity and mortality conferences. In addition, David Okonkwo, MD, PhD, clinical director of the Brain Trauma Research Center and director of the neurotrauma program in the Department of Neurosurgery, invites all fellows to join him and his team, along with members of rehabilitation medicine, for weekly Rehab Rounds at the Neurotrauma ICU. Weekly brain cuttings are also offered through the Department of Neuropathology.

Evaluation of Fellows

Fellows receive formal evaluations from all supervisors four times per academic year. In addition, the Fellow will meet with both the Training Director and Executive Director twice per year for a general overview of their performance and supervisors' feedback. Fellows will be provided with a specific plan to improve upon areas needing improvement if necessary. Formal due process procedures are in place for both the Fellow and the training program regarding problem situations.

Learning Experiences

The following experiences are available to all postdoctoral fellows, who are encouraged to be active and engaged in the research process, and take advantage of available opportunities.

Monthly Grand Rounds – Presentations by nationally recognized speakers in the area of concussion and mTBI. Previous speakers have included: Gary Solomon, PhD, John Leddy, MD, Jeff Bazarian, MD, Chris Giza, MD, Mike McCrea, PhD, and Grant Iverson, PhD. Junior and Senior fellows will present their own research projects at the Lightning Grand Rounds sessions each year.

Monthly Clinical Didactic/Case Conference – Variety of topics related to clinical care, as well as case presentations with round table case conceptualization discussion.

Monthly Clinical Didactic/Case Conference – Variety of topics related to clinical care, as well as case presentations with round table case conceptualization discussion.

Monthly Research Meeting – Research Director Dr. Anthony Kontos will direct monthly research didactics for all fellows which will cover topics including research ethics/IRB training, statistics/research design, journal article and grant writing, presentation development, and critical examination of current research trends in the field. Fellows are expected to share research ideas and current projects, and will receive feedback from both peers and supervisors.

Monthly Journal Club – Discussion of timely articles and topics related to the clinical care of patients with concussion and cutting-edge research on concussion and TBI.

Mentored Research Opportunities in the Concussion Research Lab

– Participation in mentored research activities, including subject recruitment and consent, data collection, entry and analysis, study design, and development of papers and presentations. In Year 1 of the fellowship, fellows will lead one or more research projects involving pre-existing data, culminating in professional presentations and peer-reviewed manuscript submissions. In Year 2, fellows will lead an original, prospective research projects for which they will propose a study design; complete UPitt IRB approval; collect/enter/analyze data; present and write a manuscript for publication in a peer-reviewed journal.

CITI IRB and COI Training – All fellows will complete CITI human subjects IRB and COI training modules prior to being involved in research.

Clinical Translational Science Institute (CTSI) – Fellows will have the opportunity to attend training, seminars, and courses in clinical and translational research.

Research Readings – Fellows will be assigned a comprehensive digital packet of peer-reviewed readings at the start of their fellowship. The readings are designed to orient fellows to the current state of research and clinical practice in the field with an emphasis on our clinical profiles model and targeted, active treatment approach that forms the basis for their clinical work during the fellowship.

Journal Reviews – Fellows will have the opportunity to serve as mentored reviewers with faculty for approximately 3-4 peer-review journal submissions per year.

Professional Presentations – Fellows are encouraged to participate in the development and delivery of professional research presentations at national, regional, and local conferences. As a goal, fellows are encouraged to participate in two to four presentations per year, with at least one as the primary presenter. Support is provided for fellows to attend and present at one national conference each year of their fellowship.

Professional Publications – Fellows are encouraged to participate in the development of professional research papers, chapters, and review articles. As a goal, fellows are encouraged to participate in two to four papers per year, with at least one as the first author.

Relationship with NASCAR

The UPMC Sports Medicine Concussion Program has developed a growing relationship with NASCAR through frequent evaluation of some of the sport's most prominent drivers. Fellows will have the opportunity to participate in the evaluation of drivers under the supervision of Dr. Collins. In addition, opportunities may be available to travel to NASCAR events to represent the UPMC Sports Medicine Concussion Program.

UPMC Concussion Network in Ireland

In 2018, our Program launched the UPMC Concussion Network, expanding our clinical model on the international stage by establishing six locations in Ireland. Drs. Collins and Kontos provide regular supervision and trainings to the lead medical professionals for each of the Ireland locations. Future plans include a similar network of clinics in Italy.

OVERVIEW OF CONCUSSION RESEARCH LAB AND PROJECTS

The Concussion Research Laboratory (CRL) is led by Research Director Dr. Anthony Kontos, PhD. The CRL is located close to the main clinic at UPMC Sports Medicine, and includes over 2,500 square feet of research and office space. Research staff includes research and project coordinators, research assistants, post-doctoral research fellows, and doctoral students.

Our neuropsychology fellows are actively involved in grant funded research and are encouraged and mentored to pursue their own research interests. Fellows have access to the CRL's equipment and software such as SPSS and MatLab, to support their research during their fellowship. Fellows are encouraged to spend their weekly "research days" at the CRL.

An exciting aspect of the research lab is the ongoing access to a large, clinical research database that provides access to data on thousands of patients for clinical research projects. This database provides many opportunities to collaborate with the

University of Pittsburgh MRI Research Center, the Departments of Neurosurgery, Otolaryngology, Psychology, and Physical Therapy, and the Eye and Ear Institute.

Our research has been funded by the *Centers for Disease Control and Prevention (CDC)*, *National Institutes for Health (NIH)*, *Department of Defense (DoD)*, the *National Football League (NFL)*, *National Collegiate Athletic Association (NCAA)* and other corporate sponsors. Our faculty publish on average ~40 impactful and innovative research articles each year in high-impact journals including *JAMA Pediatrics*, *Pediatrics*, *American Journal of Sports Medicine*, and *British Journal of Sports Medicine*.

Research Summary for 2021-2022

Clinical Trial Research Highlights – FY 2021-22 was a highly productive year for our clinical research team at the *UPMC Sports Medicine Concussion Program*. To date, we have enrolled nearly 200 pediatric patients from *UPMC Pittsburgh Children's Hospital and Children's Wisconsin* into our *Centers for Disease Control and Prevention (CDC)*-funded *Active Injury Management (AIM)* randomized controlled trial (RCT) of active treatments in this at-risk population. In our ongoing *Department of Defense*-funded *Targeted Rehabilitation Exercises for Vestibular (T-REV)* RCT, we are developing clinical guidelines for prescribing vestibular rehabilitation in military personnel and civilians following concussion. We also have enrolled over 50 patients into our new *Targeted Multi-domain (T-MD)* RCT, a multisite study with *Inova Sports Medicine Concussion Program (Fairfax, VA)* of the effectiveness of targeted treatments in military-aged civilians. Of note, we will begin enrolling patients into the first-ever RCT of concussion treatment in older adults in late 2022. Overall, we enrolled over 1000 patients across the lifespan into concussion clinical research studies during FY 2021-22.

The Future is Now: Applying Cutting-Edge Markers to Concussion Clinical Profiles –

During FY 2021-22 our program led multiple projects involving state-of-the-art biological markers to inform concussion clinical assessment and treatments. Through the support of the *Chuck Noll Foundation*, we continued to analyze microRNA data using saliva samples collected through an ongoing *National Institute of Mental Health*-funded imaging study of anxiety and concussion in adolescents. The *Chuck Noll Foundation* also supported a multisite (with *Children's Hospital of Philadelphia*) study of saliva-based neuroinflammatory and other markers of concussion clinical profiles in children. We also began enrolling adolescent athletes into a saliva neuroinflammatory biomarker study to identify persistent post-concussion symptoms (PPCS) funded by the *Eunice Kennedy Shriver National Institute of Child Health and Human Development*. Drs. Collins Kontos also served as primary investigators for a *National Football League*-funded study of clinical and biological markers of brain health in former professional football players.

COMMUNITY OUTREACH

All neuropsychology fellows are encouraged to participate in ongoing community outreach. UPMC Sports Medicine partners with over 60 area high schools and universities to offer both on-field and in-office management of sports injuries including concussion. As such, neuropsychology fellows are often asked to educate school professionals, coaches, student-athletes, and parent groups on concussion basics and the importance of proper post-injury management.

In addition to education, the UPMC Sports Medicine Concussion Program is proud to partner with the Pittsburgh Penguins Foundation to offer the HeadsUP Pittsburgh program. HeadsUP Pittsburgh provides free neurocognitive baseline testing for athletes ages 7 to 14 in western Pennsylvania. Athletes 15 and older are offered baseline testing for a nominal fee as well. Neuropsychology fellows are welcome to learn more about and become involved with this program.

For a closer look at the UPMC Sports Medicine Concussion Program's treatment approach, multidisciplinary team, research updates, and patient stories, please visit our website at UPMC.com/Concussion. Also, follow us on Twitter [@UPMC_Concussion](https://twitter.com/UPMC_Concussion).

Setting the Standard with Impactful Publications – Our program faculty again published over 40 peer-review papers in high impact journals including 11 papers in journals rated with Impact Factors greater than 10, bringing our total across three years to over 115 publications. Our work appeared in prestigious journals including *Journal of Pediatrics*, *American Journal of Sports Medicine*, and *Journal of Neurotrauma*. Highlights included the first ever RCT evidence for precision vestibular rehabilitation in adolescents following concussion (see *Journal of Pediatrics*), research on the effects of COVID-19 on concussion care (see *Journal of Neurotrauma*), an examination of fixational eye movements following concussion (see *Journal of Vision*), and ground-breaking work on a new dynamic exertion test to inform safer return to sport (see *International Journal of Physiological Performance*). Overall, our research was cited 1300 times in 2021 alone.

Publications and Citations 2010-2021

FELLOWSHIP APPLICATION AND SELECTION PROCEDURES

The UPMC Sports Medicine Concussion Program seeks qualified applicants from doctoral training programs in psychology. The fellowship seeks applicants interested in a career specializing in the evaluation and management of sports-related concussion. Applicants to the two-year clinical neuropsychology specialty program are required to demonstrate academic and clinical experience in neuropsychology, conveyed through formal coursework, clinical experience, and letters of recommendation.

Applicants must have completed all requirements for their doctoral degree, which includes the successful defense of their dissertation prior to starting the postdoctoral fellowship.

In order for the program to make an offer to an applicant who has not yet completed their dissertation defense, a letter from the chair attesting that the dissertation will be completed prior to the start of the fellowship is required. In addition, candidates' doctoral program and internship must be accredited by the American Psychological Association.

Postdoctoral fellows are selected on the basis of academic excellence, clinical experience, research experience, recommendations of professors and supervisors, interview, and interests. Given the work environment and primary population served, consideration is given to certain aspects of life experience, particularly experience with sports. There are currently three anticipated openings for 2023-2025. Application deadline is November 30, 2022. Applications are reviewed once complete, and a select number of prospective applicants are invited for an on-site interview day in mid-December.

APPLICATION PROCEDURE

All application materials are to be submitted by November 30, 2022. Materials must be submitted via the UPMC Careers website at <http://careers.upmc.com> (Job Title: Neuropsychology Fellow). If there are any difficulties with the online submission, please contact Dr. Nathan Kegel via email, at kegelne@upmc.edu, and alternative arrangements can be made.

The following materials are required:

1. **Statement of goals and interests**
2. **CV**
3. **Three letters of recommendation (at least one from an internship supervisor). If submitting electronically, please scan all three signed letters into one PDF document.**
If this is not possible, references may also email letters to the Fellowship Director at the email address below.

For application questions:

Dr. Nathan Kegel | kegelne@upmc.edu

Local Information

The UPMC Sports Medicine Concussion Program is affiliated with the University of Pittsburgh. Founded in 1787, the University is one of the oldest higher education institutions in the United States and one of the most respected and productive research centers. Pitt's main campus is in Oakland, only five minutes from the UPMC Rooney Sports Complex, opening much of the city to affordable living options and plentiful cultural opportunities.

Pittsburgh is known both for its livability and affordability, consistently ranking among the most livable cities in the United States. The city boasts a number of museums, including the Carnegie Museums of Art, Natural History, and Science; the Andy Warhol Museum; the Mattress Factory Art Museum; Phipps Conservatory and Botanical Gardens; Senator John Heinz Pittsburgh Regional History Center; and the Soldiers and Sailors Memorial Hall and Museum. Pittsburgh's theater district is a short bus ride away and includes a number of active theaters with top acts in musical theater. In addition, Pittsburgh is home to a vibrant sports scene, including professional football, baseball, and hockey teams, as well as a full range of collegiate athletics through Pitt and other local universities. Please visit the following links for more information regarding moving to Pittsburgh and exploring the city:

UPMC SPORTS MEDICINE CONCUSSION PROGRAM FACULTY

Michael “Micky” Collins, PhD *Executive and Clinical Director*

Michael “Micky” Collins, PhD, is an internationally renowned expert in sports related concussion. A leading clinician and researcher, Dr. Collins serves as director and a founding member of the UPMC Sports Medicine Concussion Program. Established

in 2000, it was the first program of its kind; more than a decade later, it remains the largest research and clinical program focused on the assessment, treatment, rehabilitation, research, and education of sports-related mild traumatic brain injury in athletes of all levels. Dr. Collins’ expertise attracts elite and professional athletes from around the world seeking the comprehensive care he provides and the multidisciplinary approach he helped to introduce. The program has roughly 20,000 patient visits annually at seven different locations across Pittsburgh. Dr. Collins and his UPMC program colleagues attract patients embodying youth, high-school, collegiate, and pro athletes with concerns about safe return to play and clinical management and treatment of sports concussion.

Besides his extensive clinical experience, Dr. Collins also has been a lead author and investigator on numerous groundbreaking studies of high-school and college athletes published in JAMA, Neurosurgery, and the American Journal of Sports Medicine and Pediatrics, among many others. He has been the lead author or co-author on more than 180 peer-reviewed research articles and has delivered more than 550 presentations at national and international scientific meetings. Dr. Collins currently has upward of \$10 million in funding for his research efforts from entities including the NFL-GE Head Health Challenge, National Institute of Health, Major League Baseball, and the United State Army Special Operations Command. National and local media frequently interview him as an expert source.

Dr. Collins has been an instrumental source across the nation in developing concussion-management policy in youth sports, state legislation on youth safety, the Centers for Disease Control’s concussion toolkit, and pioneering targeted treatment pathways for his patients. He is a co-founder of ImPACT (Immediate Post-Concussion Assessment and Cognitive Testing), the most widely used computerized sports-concussion evaluation system that has become a standard of care in nearly all organized sports at all levels. As a result, he is a leader in educating and implementing the proper usage of such baseline and post-injury neurocognitive testing as one tool to help determine an injury’s severity and recovery for safe return to play. More recently, Dr. Collins was the Meeting Chairman for the Targeted Evaluation and Active Management (TEAM) Approach to Treating Concussion. This meeting was held in Pittsburgh in October 2015 and was the first focused meeting regarding treatment of sports-related concussion. Underwritten by the NFL, this meeting resulted in the first published white paper on treatment of concussion, published in Neurosurgery.

In addition to training thousands of physicians and certified athletic trainers in the diagnosis, management, and treatment of sports-related concussion, he advises and is a consultant to numerous athletic organizations and teams, including the NFL Steelers, the NHL Penguins, other NFL teams, numerous MLB clubs, several NCAA programs, USA Rugby and many international sports affiliations. He serves as an Associate Editor of the Journal of Neurosurgery and the Journal of Sports Neurology. Dr. Collins is also on the editorial board of such publications as Brain Injury Professional and the Journal of Athletic Training.

A graduate of the University of Southern Maine with a bachelor’s degree in psychology and biology in 1991, Dr. Collins earned a master’s degree in psychology in 1995 and doctorate degree in clinical psychology in 1998 at Michigan State University.

Among numerous national and international honors over the past decade, in 2022, Dr. Collins has been promoted to Professor and the Arthur J Rooney, Sr. Chair in Sports Medicine. He has also been named an Irish-America Healthcare and Life Sciences Top 50 Honoree. In 2010, he received the National Council on Brain Injury annual award for outstanding research and advocacy. In 2009, he was bestowed the Kenneth L. Knight Award for outstanding research. In 2007, the National Academy of Neuropsychology honored him with the Annual Butters Award. An athlete himself, Dr. Collins played in the 1989 NCAA Baseball College World Series for the University of Southern Maine.

Anthony Kontos, PhD *Research Director*

Dr. Kontos is Director of Research for the UPMC Sports Medicine Concussion Program and Professor with tenure in the Departments of Orthopaedic Surgery and Sports Medicine and Rehabilitation at the University of Pittsburgh. He received his

doctoral degree in kinesiology/sport psychology from Michigan State University where he received master’s degrees in counseling psychology and exercise science and completed an internship in counseling psychology. He completed his B.A. in psychology at Adrian College (Adrian, MI), where he was a four-year starter on the men’s soccer team.

Dr. Kontos has specialized in concussion/mild traumatic brain injury (mTBI) research for the past 18 years, has 214 peer-reviewed publications and over 380 professional presentations. He has received research funding as a principal investigator from external sources including the Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), Department of Defense (DoD), U.S. Special Operations Command, National Collegiate Athletic Association (NCAA), National Football League (NFL), Chuck Noll Foundation for Brain Injury Research, National Operating Committee of Standards for Athletic Equipment, and the NFL Charities. His research focuses on concussion including clinical trials of active, precision treatments; risk factors; neurocognitive and neuromotor effects; psychological issues;

and concussion in military, pediatric, and sport populations. Dr. Kontos is a reviewer for journals including the New England Journal of Medicine, Journal of the American Medical Association, American Journal of Sports Medicine, Pediatrics, and Neurotrauma; as well as an invited reviewer of grants for the NIH, DoD, NCAA Grand Challenge, National Athletic Trainers Association, Walter Reed Army Institute for Research, and U.S. Army Medical Research, and Materiel Command. He served as chair of the sub-acute subgroup on the NIH Sports Concussion Common Data Elements working group and was member and co-author of the 2019 American Medical Society for Sports Medicine's (AMSSM) position statement on concussion in sport.

Prior to coming to UPMC, Dr. Kontos was a professor and chair-elect at California State University- Humboldt and director of the North Coast Sports Concussion Program in northern California, and an associate professor with tenure and associate chair of the IRB at the University of New Orleans, where he directed its sport concussion testing program. While in New Orleans, Dr. Kontos also was an Adjunct Professor in the Sports Medicine Fellowship at Louisiana State University-Health Sciences Center.

Dr. Kontos is also a fellow, past-president, and former council representative of the American Psychological Association's Division 47- Society for Sport, Exercise & Performance Psychology, and a fellow of the National Academy of Kinesiology, the Association for Applied Sport Psychology, and the Eastern Psychological Association. In 2014, Dr. Kontos participated in the White House Healthy Kids & Safe Sports Concussion Summit, and co-directed the 2015 Targeted Evaluation & Active Management Approach to Treating Concussion meeting in Pittsburgh, PA. He is also the lead co-author (with Dr. Michael Collins) of Concussion: A Clinical Profiles Based Approach to Assessment and Treatment.

Nathan Kegel, PhD
Fellowship Director

Dr. Kegel is a clinical neuropsychologist with the UPMC Sports Medicine Concussion Program and assistant professor in the Department of Orthopaedic Surgery at the University of Pittsburgh. He earned a bachelor's degree in psychology from the University of Pittsburgh and a master's degree in Child Psychology from Duquesne University. He completed an APA-accredited doctoral program in school psychology at Duquesne University, as well as an APA-accredited internship in pediatric neuropsychology at The Watson Institute in Sewickley, Pa. Dr. Kegel has been a part of the UPMC Sports Medicine Concussion Program since 2009, first completing a two-year fellowship program in sports neuropsychology. He was hired as full-time clinical faculty in 2011.

Dr. Kegel has been fellowship director for the UPMC Sports Medicine Concussion Program since 2017. He is responsible for nationwide recruitment of post-doctoral fellowship candidates, and development of training material for current fellows. He has taught several semester-long child neuropsychology classes as an adjunct professor at Duquesne University, and frequently

conducts lectures and workshops related to sports concussion on a local and national level. Dr. Kegel's current research interests center around assessment and management of pediatric concussion.

Vanessa Fazio-Sumrok, PhD

Dr. Fazio-Sumrok is a clinical neuropsychologist with the UPMC Sports Medicine Concussion Program and assistant professor in the Department of Orthopaedic Surgery. Dr. Fazio-Sumrok earned a doctoral degree in clinical psychology from Suffolk University, with a concentration in neuropsychology.

She completed an APA-accredited clinical internship in neuropsychology at Allegheny General Hospital in Pittsburgh. Dr. Fazio-Sumrok joined the faculty in 2008 after completing a two-year post-doctoral fellowship with the UPMC Sports Medicine Concussion Program, and her clinical specialty is pediatric concussion.

Jonathan French, PsyD

Dr. French is a clinical neuropsychologist with the UPMC Sports Medicine Concussion Program and assistant professor in the Department of Orthopaedic Surgery. He graduated from Widener University in 2010 with his doctorate in clinical psychology and concentrations in forensics and neuro-

psychology. He completed his internship in the neuropsychology division of Delaware Youth and Family Services. Dr. French focused his research at Widener on traumatic brain injury, as well as the evaluation of malingering in neuropsychological testing. His dissertation examined personality characteristics of individuals engaging in malingering during neuropsychology assessment. Upon completion of his doctorate, Dr. French completed a post-doctoral fellowship at the UPMC Sports Medicine Concussion Program. His current clinical interests include working with school districts in the area to provide the proper accommodations to individuals who have suffered a concussion.

Alicia Trbovich, PhD

Dr. Trbovich is a clinical neuropsychologist with the UPMC Sports Medicine Concussion Program and assistant professor in the Department of Orthopaedic Surgery. She is a Wisconsin native, completing her bachelor's degree at Marquette University with concentration in psychology and biological

sciences. She then earned a doctorate in clinical health psychology with an emphasis in neuropsychology at East Carolina University. Dr. Trbovich completed her predoctoral internship in neuropsychology at the University of Florida/ Shands Hospital and a two-year postdoctoral fellowship with the UPMC Sports Medicine Concussion Program. Dr. Trbovich's clinical interests include assessment and management of sports-related concussions within pediatric and adolescent populations. Her current research interests include the role of sleep in recovery from concussion, and identifying risk factors for injury and poor outcomes following concussion.

CURRENT FELLOWS

Ted Albrecht, PsyD

Dr. Albrecht joined the UPMC Sports Medicine Concussion Program as a postdoctoral fellow in August 2021. He earned his doctoral degree in clinical psychology from Alliant International University while completing concentrated training in neuropsychology and completed an APA-accredited internship at the Gulf Coast Veterans Healthcare System in 2021. Previously, he earned degrees in psychology and economics from the University of California at Santa Barbara. Dr. Albrecht's clinical and research interests include assessment and the interventional use of tools for recovery from sport-related injury and concussion. When he is not working, he enjoys golfing, playing basketball, running, and seeking new experiences.

Chris Burley, PhD

Dr. Burley joined the UPMC Sports Medicine Concussion Program as a postdoctoral fellow in August 2022. He earned his doctoral degree in clinical psychology from Nova Southeastern University and completed an APA-accredited internship in neuropsychology at the Memphis VA Medical Center in collaboration with St. Jude Children's Research Hospital and the Semmes-Murphey Clinic. Previously, he earned his bachelor's degree in psychology at Villanova University where he was a walk-on wide receiver for the Wildcats football team. Dr. Burley's clinical and research interests include active treatments for concussion, psychological issues in concussion recovery, and long-term neurocognitive outcomes. When he is not working, he enjoys exercising, brewing coffee, and spending time with his wife and dog.

Dean Gomes, PhD

Dr. Gomes joined the UPMC Sports Medicine Concussion Program as a postdoctoral fellow in September 2021. He earned his doctoral degree in clinical psychology from Fordham University with concentrations in child and family studies and neuropsychology. He completed an APA-accredited internship at New York City Children's Center, Queens Campus, in 2021. Previously, he earned a bachelor's degree in psychology at the University of Rochester. Dr. Gomes' clinical and research interests include reporting patterns in adolescent athletes, and the impact of race on the assessment and management of concussion. When he is not working, he enjoys exercising, watching sports, and playing video games.

Bindal Makwana Mehmel, PhD

Dr. Mehmel joined the UPMC Sports Medicine Concussion Program as a postdoctoral fellow in August 2021. She earned her doctoral degree in clinical psychology from Idaho State University and completed an APA-accredited internship at the Bay Pines VA Medical Center in 2021. Previously, she earned her bachelor's degree in psychology with a minor in dance at Drexel University. Dr. Mehmel's clinical and research interests include examining tools utilized in the assessment and management of sport-related concussion. When she is not working, she enjoys skiing, traveling, watching sports, and dancing.

Shan Patel, PsyD

Dr. Patel joined the UPMC Sports Medicine Concussion Program as a postdoctoral fellow in August 2022. He earned his doctoral degree in clinical psychology from Adler University, with an emphasis focus on clinical neuropsychology. Dr. Patel completed an APA-accredited internship in 2022 at Centerstone Hospital in Bradenton, FL. Previously, he earned his bachelor's degree in neuroscience at Temple University. Dr. Patel's clinical and research interests include examining tools utilized in the assessment and management of concussions. When he is not working, he enjoys watching sports and producing music.

MEDICAL DIRECTOR

Joseph C. Maroon, MD

Dr. Maroon is clinical professor of neurological surgery and the Heindl Scholar in Neuroscience at the University of Pittsburgh School of Medicine. He received his medical and neurosurgical training at Indiana University, Georgetown University, Oxford University in England, and the University

of Vermont. He is board-certified in neurological surgery.

Dr. Maroon's clinical and research interests are in the development of minimally invasive surgical procedures for the brain and spine; the prevention and treatment of traumatic injuries to the central nervous system; innovative approaches to pituitary and brain tumors; and complementary approaches to inflammatory diseases of aging. A lifelong athlete, Dr. Maroon has served as team neurosurgeon for the Pittsburgh Steelers for more than 25 years.

UPMC policy prohibits discrimination or harassment on the basis of race, color, religion, ancestry, national origin, age, sex, genetics, sexual orientation, gender identity, marital status, familial status, disability, veteran status, or any other legally protected group status. Further, UPMC will continue to support and promote equal employment opportunity, human dignity, and racial, ethnic, and cultural diversity. This policy applies to admissions, employment, and access to and treatment in UPMC programs and activities. This commitment is made by UPMC in accordance with federal, state, and/or local laws and regulations.
